

# SI 206 - Final Project Report

By Jade Stoler & Dylan Zgodny

# Goals of Our Project

---

Initial Goal: Determining if there is a correlation between a state's obesity rate and the number of Planet Fitness gyms

- [Find a Planet Fitness Gym near me](#)
- [Obesity rate by state](#)
- Possible API's:
  - [BMI](#)
  - [Exercise/Gym API](#)

Visualizations through Plotly and code in Jupyter Notebooks

# Goals That Were Achieved

---

Determine if there is a correlation between the number of Planet Fitness Gyms and obesity/leisure rates around the country within certain age groups

- [Find a Planet Fitness Gym near me](#)
- [State Abbreviations API](#)
- [Obesity and Leisure Questions](#)
  - Questions: Percent of adults who engage in no leisure-time physical activity and Percent of adults aged 18 years and older who have obesity

Visualizations through Plotly and code in Jupyter Notebooks

# Problems We Faced

---

- Finding an API
  - Gym/BMI API → API for abbreviations of states
- Working with an API
  - Sifting through a lot of information
  - Creating and editing our queries
- Finding a correlation
  - Tested age, income, education, race, and gender
  - No clear correlation (as seen through most of the regression lines being horizontal)
- Testing with the obesity vs. leisure data
  - They were very similar

# Calculations From The Data in The Database

---

# Table with State, Population, and Abbreviations

```
population['abbr'] = population['Name'].map(us_state_to_abbrev)
```

	Name	Pop	State	abbr
0	Mississippi	2976149	28	MS
